
Verified AgentPay for GIWA

Policy-controlled, non-custodial escrow for AI-agent work —
with retained GIWA Sepolia evidence.

AI agents can pay. Trust still breaks between systems.

FRAGMENTED TODAY

Counterparty identity
Spend authority
Delivery status
Release approval

Each answer usually lives in a different wallet, policy service, workflow, or audit log.

TRUST BOUND TO THE PAYMENT

One intent.
One policy decision.
One canonical receipt.

AgentPay makes identity, authorization, escrow state, delivery proof, and human release reviewable as one transaction-bound evidence trail.

Guarded workflow binds policy, escrow, and evidence.

REQUEST → VERIFY → POLICY → FUND → SUBMIT → RELEASE / REFUND

01 IDENTIFY

02 CONTROL

03 SETTLE

Verify the parties

Merchant creates a job. Payer and provider are checked through Dojang testnet attestations.

Constrain the agent

XPAYR returns ALLOW, HOLD, or DENY. Only an allowed intent can fund the non-custodial escrow.

Finish canonically

Provider submits a delivery hash. Human approval releases—or a bounded terminal path refunds—and XPA2 seals the evidence.

GIWA is part of the product logic—not a network toggle.

01 DOJANG VERIFIED ADDRESS

Participant checks are bound to the job. Current proof is a TESTNET_FAUCET attestation with test_only=true—not KYC.

02 GIWA SEPOLIA ESCROW

The lifecycle executes on chain 91 342 in an XPAYR escrow contract, preserving participant and human-release authority.

03 FLASHBLOCKS FEEDBACK

A fast signal can improve pending UX. Completion is claimed only after the canonical transaction receipt is verified.

04 GIWA WALLET PATH

Pending jobs, approve, release, refund, and dispute are designed for a native wallet surface. Integration is the next phase—not a shipped claim.

GIWA Sepolia • Chain 91342 • Escrow 0x7b0630cBb92be8E11512cb331b8D1aef94cEEc53

The shipped MVP shows the full reviewer flow.

AVAILABLE NOW

- Create a bounded agent intent
- Verify payer and provider
- Return ALLOW / HOLD / DENY
- Fund and control non-custodial escrow
- Open retained evidence and explorer links

Scope boundary
Testnet only—no mainnet, real funds, stablecoin claim, autonomous evaluator release, GIWA Wallet implementation, or grant-outcome claim.

The testnet proof is repeatable, bounded, and reviewable.

Two canonical terminal paths are retained with authenticated XPA2 envelopes.
Source verification: `verified_partial_expected_no_cbor` — never presented as FULL.

Historical source run 221/221 • Public package 107/107 • Reviewer 11/11 • Foundry 36/36

5 / 5

RELEASE LIFECYCLE

RELEASED terminal state
XPA2 receipt authenticated

4 / 4

REFUND LIFECYCLE

REFUNDED terminal state
XPA2 receipt authenticated

2 / 2

AUTH-V2 CASES

Producer signature checked
Anchor binding checked

A five-month path compounds market evidence.

PRE-PILOT WEDGE / translation, research, and digital-service jobs

TESTNET MVP

Validate job intent → human release with demo users. Track completion, refund paths, and evidence usability.

Proof already shipped
Canonical release + refund

PRIVATE MAINNET + KBW

Harden policy, authority, and monitoring. Demonstrate wallet interaction and report success, time-to-release, retry, and refund KPIs.

Target outcome
Wallet-ready reviewer demo

GROWTH STAGE

Integrate agent platforms and service marketplaces. Add session keys and paymasters only after security and authority gates.

Scale signal
Successful jobs + user growth

MVP

PRIVATE MAINNET
